

## OAI-compliant data providers

The OAI framework behind PlanktonNet is comprised of:

- Several networked OAI-PMH compliant data providers (=nodes) where plankton taxonomy, imagery and contextual information are archived and displayed. The software "biodivDP" was developed specifically for PlanktonNet in the framework of data ingestion and management. "**biodivDP**" also offers several useful tools and a glossary. (read more on how to [become a data provider](#)). To date, the following PlanktonNet nodes are available:

1. [PlanktonNet @ AWI](#)
2. [PlanktonNet @ Lisbon](#)
3. [PlanktonNet @ Roscoff](#)
4. [PlanktonNet @ Israel](#)

- An [OAI service provider](#) which daily harvests and archives all the metadata found in the registered data providers listed above.
