

### Metadata portal: OAI service provider

As part of the OAI framework designed to sustain long-term archival and interoperability among PlanktonNet nodes, we have developed a metadata portal which enables scientists, managers and students to simultaneously access and mine all nodes within the PlanktonNet project. .

In addition to PlanktonNet data, we are also harvesting **environmental primary data** archived in [WDC-Mare/Pangaea](#) and various OAI-compliant **publication** repositories in Europe such as [ePIC](#) (Germany), [Archimer](#) (France) and [Papadocs](#) (Portugal). For a complete list of all harvested repositories and respective number of records, visit our data portal.
